

MAHEESHA PRAMUDITHA

Software Engineering Intern Candidate

Kelaniya, Sri Lanka | +94 70 384 9949 | pramudithamaheesha@gmail.com

LinkedIn | GitHub | Portfolio

PROFILE

Computer Science Undergraduate with hands-on experience in building backend systems, cloud-based applications and AI-driven platforms. Experienced in developing software through competitive hackathons, open-source contributions and collaborative projects. Strong problem-solving skills with a focus on writing reliable software and continuously improving engineering practices.

TECHNICAL SKILLS

- Languages:** Java, Python, Go, C#, SQL
- Frameworks:** Spring Boot, FastAPI, ASP.NET, LangGraph
- Databases:** MySQL, PostgreSQL, MongoDB
- Cloud & DevOps:** GCP, AWS, Azure, Docker, Git, GitHub Actions, CI/CD

EDUCATION

BSc (Hons) in Computer Science,
Sri Lanka Institute of Information Technology (SLIIT) Oct 2024 - Nov 2028 (Expected)
CGPA - 3.43/4.00
Modules: Design and Analysis of Algorithms (A), Database Management Systems (A), Distributed Systems (A)

SOFTWARE PROJECTS

- Sellora - Multi-Tenant FMCG Distribution Platform (Group), ASP.NET, Azure, WSO2 IS & APIM**
- Built a multi-tenant field-sales platform for FMCG distributors comprising 7 microservices with Kafka-based event-driven messaging, enforcing strict tenant isolation and role-based access control through WSO2 Identity Server and API Manager.
 - Engineered the order and payment transaction core with real-time agency synchronization and a secure audit log to preserve data integrity and prevent record manipulation.
- Synkron - AI Documentation Sync Agent (Individual), React, FastAPI, MongoDB**
- Solved documentation drift by building an event-driven multi-agent platform that analyzes each code commit and opens a review-ready pull request with updated documentation, achieving 84% accuracy across 106 test runs at \$0.0017 per run.
 - Implemented GitHub App authentication with short-lived installation tokens, enabling secure repository access across multiple environments without long-lived credentials.
- IncidentIQ - Multi-Agent Incident Diagnosis Platform (Individual), FastAPI, LangGraph, PostgreSQL**
- Built a multi-agent incident diagnosis pipeline that analyzes production logs and generates evidence-backed root-cause hypotheses with confidence scores.
 - Deployed to GCP Cloud Run using GitHub Actions CI/CD and Secret Manager, integrating Slack and PagerDuty for multi-tenant incident notifications.
- ArchGuard - Polyglot Architectural Linter Platform (Individual, ongoing), Java, Spring Boot, PostgreSQL**
- Built an event-driven analysis pipeline in which a REST API queues jobs through RabbitMQ and background workers clone repositories, extract ASTs through a Python sidecar and persist layer-boundary violations to PostgreSQL.
 - Currently extending the engine with dependency-graph cycle detection (Tarjan's SCC), YAML-configurable layer rules and signed GitHub webhooks that post architectural reports on pull requests.

OPEN SOURCE CONTRIBUTIONS

WSO2 | 4 Merged Pull Requests across product-is, docs-is and docs-mi

- Corrected the integration test path in the WSO2 Identity Server contributor guide. [PR1]
- Fixed technical errors in WSO2 Micro Integrator and Identity Server documentation. [PR2 | PR3 | PR4]

KEY ACHIEVEMENTS

Winner - SciFest 2025, Faculty of Humanities and Sciences, SLIIT

- Built a road sign identification and alerting system using machine learning and computer vision.

First Runner-Up - IntelliCon 2025, AIESEC SLIIT

- Built an AI-powered grading platform that evaluates handwritten answer scripts against marking schemes and generates targeted feedback.

Second Runner-Up - MiniHackathon 2025, MS Club of SLIIT

- Built GlobalNest, a platform that connects migrants with verified local mentors and personalized integration pathways.

Top 10 Finalist - InnovIoT(CodeFest) 2026, SLIIT

- Built an ESP32-based WiFi sensing system that detects presence, motion and stillness through walls.

Top 10 Finalist - Mini Algothon 2026, SLIIT

- Placed in the top 10 of 50+ teams in a timed algorithms and data structures competition.

VOLUNTEERING EXPERIENCE

Subcommittee Member (DEV), Mozilla Campus Club of SLIIT

Aug 2026 - Present

- Organized and volunteered for CodeNight 2026 Linux Session and Go Session as a Development team member.
- Contributed to Certify project as a backend developer implementing administrative backend endpoints using FastAPI and Supabase. [PR]
